The division provides **technical preservation assistance** in several areas to individuals, communities and state and federal agencies.

The **federal preservation tax credit program** offers owners of historic commercial, industrial, or residential rental properties a federal income tax credit equal to 20% of the rehabilitation costs. Since 2008 more than \$1.4 billion dollars in new investment has qualified under this credit.

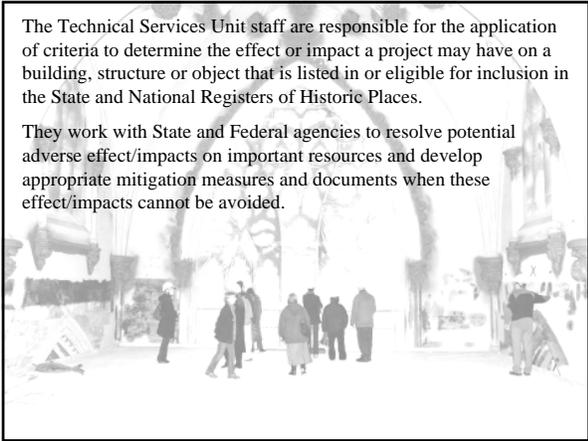

The **state preservation tax credit programs** offer owners of properties that qualify for the federal tax credit a state income tax credit equal to 20% of the approved rehabilitation costs. Owner-occupied residential properties that are listed on the registers are also eligible for a state tax credit equal to 20% of the rehabilitation.

The Technical Services Unit staff are responsible for the application of criteria to determine the effect or impact a project may have on a building, structure or object that is listed in or eligible for inclusion in the State and National Registers of Historic Places.

They work with State and Federal agencies to resolve potential adverse effect/impacts on important resources and develop appropriate mitigation measures and documents when these effect/impacts cannot be avoided.

Since 2009 the American Recovery and Reinvestment Act has funded a significant number of energy related undertakings.

Each must be reviewed under Section 106 of the National Historic Preservation Act.

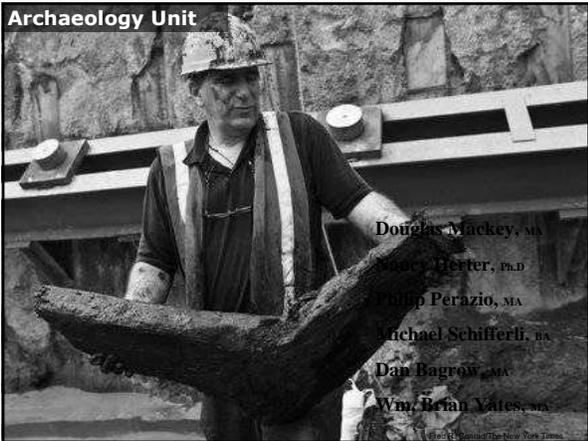

Since 2010 the Field Services Bureau reviewed and provided comments on nearly 32,000 residential units for weatherization or photovoltaic projects.

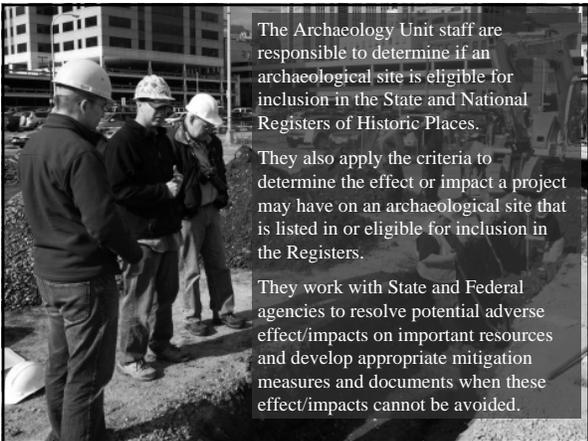

Archaeology, the study of the past through the material remains that people have left behind, is an important component of historic preservation environmental review. The division provides guidance to public agencies and local officials on how to identify and investigate cultural resources.

- Michael Schifferli, BA
- Dan Bagrow, MA
- Wm. Brian Yates, MA

The Archaeology Unit staff are responsible to determine if an archaeological site is eligible for inclusion in the State and National Registers of Historic Places.

They also apply the criteria to determine the effect or impact a project may have on an archaeological site that is listed in or eligible for inclusion in the Registers.

They work with State and Federal agencies to resolve potential adverse effect/impacts on important resources and develop appropriate mitigation measures and documents when these effect/impacts cannot be avoided.
